## REFRIGERATORS

### Osborne Refrigerators Environmental Policy

Osborne Refrigerators is a responsible business and has a long history of manufacturing with an environmental conscience. We aim for continual improvement in mitigating our direct and indirect environmental impact, reducing use of natural resources and preventing pollution. In particular:

- We have always manufactured exclusively in the United Kingdom and, wherever possible, source materials and components from the UK and Europe. This minimises our carbon footprint from shipping.
- Each refrigerator we produce is designed for a long life. High quality components are used and the refrigerators are designed so that components can be replaced if necessary. It is much more environmentally friendly to repair or refurbish than to manufacture a new refrigerator.
- Each refrigerator we produce can be easily recycled at the eventual end of its life.
- Each refrigerator we produce is designed to be as energy efficient in use as possible.
- We operate a policy of continual research, development and improvement aimed at reducing the environmental impact of our company and our products.
